Ibogaine is a natural substance derived from the root bark of the African iboga tree. It has been used for centuries by indigenous people in Africa for spiritual healing ceremonies. In recent years, ibogaine has gained popularity as a treatment for drug addiction, particularly opiate addiction. Ibogaine is thought to work by resetting the brain's chemistry, which is altered by chronic drug use. This resetting of the brain's chemistry can help break the cycle of addiction and allow the individual to start fresh.
